Subject:

sequence search for 09/617,720

Please search SEQ ID NOs: 1, 2, 3 of 09/617,720 against commercial and interference data bases. thanks.

Submitted (20-JUL-2004) Genoscope - Centre National de Sequencage :
BP 191 91006 BVRV cedex - FRANCE (E-mail : seqref@genoscope.cns.fr
Web : www.genoscope.cns.fr)
1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitogen.

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMYSPORT & vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                2605 bp mRNA linear HTC 21-JUL-2004 full-length cDNA clone CSODI013YA07 of Placenta Cot 25-normalized of Homo sapiens (human).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pwalot (gilly 4732114|gb|AR129072.1), a copy.number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent B. coli Xii0-Gold (Stratagene) cells and selected for ampicillin resistance."

Nucleic acids encoding human and murine interleukin-1L1 polypeptides useful for controlling inflammatory processes.

Claim 21; Fig 1; 150pp; English.

The present invention provides the protein and coding sequences of the human and murine interleukin-ILI (IL-ILI) proteins. The IL-ILI gene is located between the IL-Ibeta and IL-Ireceptor genes at human chromosome 2q13. The sequences are useful in the diagnosis, prevention and treatment of heart disease, cancer and inflammatory diseases such as rheumatoid arthritis, systemic lupus erythematosus, inflammatory bowel disorder, diabetes, psoriasis, osteoporosis, lichen sclerosis, ulcerative colitis,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention provides the protein and coding sequences of the human and murine interleukin-ILI (IL-ILI) proteins. The IL-ILI gene is located between the IL-lbeta and IL-Ireceptor genes at human chromosome 2q13. The sequences are useful in the diagnosis, prevention and treatment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        of heart disease, cancer and inflammatory diseases such as rheumatoid arthritis, systemic lupus erythematosus, inflammatory bowel disorder, diabetes, psoriasis, osteoporosis, lichen sclerosis, ulcerative colitis, severe periodontal disease and pregnancy complications. The present

The present invention provides the protein and coding sequences of the human and murine interleukin-ILI (IL-ILI) proteins. The IL-ILI gene is located between the IL-Ibeta and IL-Ireceptor genes at human chromosome 2q13. The sequences are useful in the diagnosis, prevention and treatment of heart disease, cancer and inflammatory diseases such as rheumatoid arthritis, systemic lupus erythematosus, inflammatory bowel disorder, diabetes, psoriasis, osteoporosis, lichen sclerosis, ulcerative colitis, severe periodontal disease and pregnancy complications. The present sequence is the IL-ILI gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; interleukin-1 receptor; IL-1; antagonist; sepsis; acute pancreatitis; endotoxic shock; cytokine induced shock; rhemmatoid arthritis; chronic inflammatory arthritis; pancreatic cell damage; diabetes mellitus type 1; graft versus host disease; inflammatory bowel disease; inflammation; pulmonary disease; autoimmune disease; inflammatory disease; antiproliferative; myelogenous leukemia; premature labor;

Extension of genomic clone B2HFLS20W

```
The present sequence encodes a human interleukin-1 (IL-1) receptor antagonist. It is an extension of AAZJ0052. The encoded polypeptide is capable of binding IL-1 receptors (IL-1Rs). The polymucleoides and polypeptides can be used for the prevention or treatment of disorders involving sepsis, acute pancreatitis, endotoxic shock, cytokine induced shock, rheumatorid arthritis, chronic inflammatory arthritis, pancreatic cell damage from diabetes mellitus type 1, graft versus host disease, inflammatory bowel disease, inflammation associated with pulmonary call disease, other autoimmune disease or inflammatory disease, ann antiproliferative agent such as for acute or chronic myelogenous leukemia or in the prevention of premature labor secondary to intrauterine artification of premature labor secondary to intrauterine activity, cytokine and cell proliferation/differentiation activity, immune stimulating or suppressing activity, hematopoiesis regulating activity, tissue growth activity, activity, hematopoiesis regulating chemokinetic activity, hemostatic and thrombolytic activity, receptor/chemokinetic activity, activity, the products can also be used for detection, diagnosis and drug screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated interleukin-1 receptor binding polypeptides, used to treat e.g. sepsis, shock, arthritis, pancreatitis, graft-versus-host disease, inflammatory disease, autoimmune disease or proliferative disease.
intrauterine infection; nutritional activity; hematopoiesis regulating activity; tissue growth activity; hematopoiesis regulating activity; chemotactic activity; chemotactic activity; chemotactic activity; anti-inflammatory activity; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 7605 BP; 2081 A; 1647 C; 1865 G; 2007 T; 0 U; 5 Other;

mediated by IL-18

```
The present invention relates to interleukin (IL)-1 receptor antagonist proteins. IL-IHy1 is useful for treating cancer, an inflammatory disease mediated by IL-18, inflammation resulting from infection or allergic reactions, and inflammation associated with chronic bronchitis, arthritis, diabetes or endothermia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                                                                                                                                                                                                                             The present sequence encodes human interleukin (IL)-IHy1 polypeptide. IL-
IHy1 inhibitors are used in the method of the invention. The
specification describes a method of inhibiting B-cell proliferation,
c specification or differentiation. The method comprises administering an
cutivation or differentiation. The method comprises administering an
inhibitor of IL-IHy1 activity to a human with elevated B-cell levels or
cactivity, in an amount that inhibits B-cell proliferation induced by IL-
IHy1. The method is useful for inhibiting or stimulating B-cell
proliferation, activation or differentiation in patients having a B-cell
related disorder (e.g. lymphoma, leukemia, myseloma or infection) or an
autoimmune disease (e.g. allergy, asthma or allergic rhinitis), or in
screening for compounds that modulate B-cell differentiation. The IL-IHY1
polypeptide, or the inhibitor of IL-IHy1 activity, is useful in preparing
differentiation or activation. The IL-IHy1 polypeptide may also be used
in preparing a medicament for reducing IgA production
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

```
The present invention describes a method of testing for bronchial asthma or chronic obstructive pulmonary disease. The method comprises determining the expression level of a marker gene in a biological sample from a subject, comparing the expression level determined with the expression level of the marker gene in a biological sample from a healthy subject, and judging whether the subject has bronchial asthma or chronic obstructive pulmonary disease. The marker gene comprises: (a) a group of genes (S1) whose expression levels increase when respiratory epithelial colls are stimmlated with interleukin-13, or (b) a group of genes (S2) whose expression levels decrease when respiratory epithelial cells are stimmlated with interleukin-13. Also described: (1) a reagent (1) for certified with interleukin-13. Also described: (1) a reagent (1) for certified with interleukin-13 and described: (1) a reagent (1) for certified with interleukin-13 asthma or chronic obstructive pulmonary disease; (2) a kit for screening for a candidate compound for a hordinal asthma or chronic obstructive pulmonary disease; (5) a marker gene for bronchial asthma or chronic obstructive pulmonary disease; (5) a marker gene or an antisense nucleic acid corresponding to a portion of the marker gene, a ribozyme, a polymuclecide that suppresses the carborial asthma or a chronic obstructive pulmonary disease, comprising to a protein encoded by a marker gene; and (7) a DNA chip for testing for expression of the gene through an RNAi effect or an antibody recognising a protein encoded by a marker gene; and (7) a DNA chip for testing for bronchial asthma or a chronic obstructive pulmonary disease, on which a group and antiasthmatic activities, and can be used in gene therapy. The method con an immobilised to assay a marker gene (1) has respiratory

genetic polymorphisms associated with an altered risk of developing an autoimmune disease (e.g. rheumatoid arthritis). The invention further comprises a method of identifying an individual that has an altered risk of developing an autoimmune disease, comprising detecting a single nucleotide polymorphism (SNP) in a nucleic acid of the invention. The DNA and protein sequences of the invention are useful for diagnosing and treating autoimmune diseases, such as: rheumatoid arthritis, type 1 diabetes, multiple sclerosis, systemic lupus erythematosus, inflammatory bowel diseases, psoriasis, thyroiditis, celiac disease, pernicious anaemia, asthma, vitiligo, glomerulonephitis, Grave's disease, myocarditis, Sjogran's disease, or primary systemic vasculitis. The present nucleic acid represents a human autoimmune disease related genomic DNA sequence of the invention. NOTE: The present sequence is not
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         shown in the specification, but has been retrieved from the WIPO website.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 165156 BP; 45717 A; 35582 C; 35601 G; 47895 T; 0 U; 361 Other;

mental disease. This sequence corresponds to the genomic sequence of the human wild type HNL4Y gene.
wild-type forms of the nucleic acid and polypeptide can be used similarly. Also detecting mutations in the nucleic acid and polypeptide, or measuring activity of the polypeptide, can be used to detect biochemical disorders that affect formation of synapses and to diagnose

The polypeptide are used to screen for agents that modulate their activity. Also nucleic acid, polypeptide, polypeptide-specific antibodies, vectors containing he nucleic acid and host cells containing the vector, are useful as pharmaceuticals for treating mental and neurological disorders, specifically autism, Asperger syndrome, schizophrenia and attention deficit hyperactivity disorder. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              nucleic acid encoding mutant protein involved in synaptogenesis, tul for treatment and diagnosis of e.g. autism, Asperger syndrome, and

```
acid sequences from mouse and human (ADAO1482-ADAO3094), and to recombinant carcinoma associated proteins (CAP) encoded by them. The invention also encompasses expression vectors and host cells comprising a nucleic acid, a polypeptide (especially an antibody) that specifically binds to the protein, and a biochip comprising CA nucleic acid or fragments thereof. The sequences of the invention were identified using a random. Many of these do not carry transduced host oncogenes or at random with great genes, meaning that cancer incidence is a direct consequence of the effects of proviral integration into host protooncogenes. The CA nucleic acid sequences can be used to diagnose
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  carcinoma (especially breast cancer, prostate cancer, lymphoma or leukaemia) or a propensity to carcinoma by determination of the sequence of a CA gene, or by determination of CA gene expression in particular tissues. CA nucleic acids, proteins and antibodies are also useful as therapeutic agents and in screening and evaluating drug candidates. The present sequence represents a specifically claimed human CA mucleic acid sequence of the invention. Note: The complete sequence data for this patent did not form part of the printed specification, but was obtained
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; carcinoma associated; oncogene; carcinoma; cancer; breast; prostate; lymphoma; leukaemia; cytostatic; gene therapy; drug screening;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to recombinant carcinoma associated (CA) nucleic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New recombinant nucleic acid encoding carcinoma associated protein, useful for preparing compositions for treating carcinomas.
Human DPT carcinoma associated gene, SEQ ID NO:1394
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 1; SEQ ID NO 1394; 245pp; English

A polynucleotide of the invention has cytostatic activity, and may have a use in gene therapy, or in a vaccine. The recombinant nucleic acids and polypeptides are useful for treating carcinomas, e.g. lymphomas, cancers, neoplasm, adenocarcinoma, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 recombinant nucleic acid, useful for treating carcinomas, lymphomas,

New recombinant nucleic acid comprising a nucleotide sequence of any of the carcinoma-associated (CA) genes, useful for screening for drug

candidates for diagnosing or treating carcinomas.

Claim 1; SEQ ID NO 141; 983pp; English.

                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a recombinant nucleic acid comprising a nucleotide sequence selected from any of the fully defined carcinomassociated (CA) genes from the 50 tables given in the specification. The CA proteins are secreted, transmembrane or intracellular proteins. The recombinant nucleic acids are useful for screening for drug candidates for diagnosing or treating carcinomas. Sequences given in ADC85215-ADC85514 represent CA genes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

New carcinoma associated gene or protein, useful for preparing a composition for diagnosing or treating carcinoma e.g., leukemia or lymphoma.

Claim 1; SEQ ID NO 142; 29pp; English

The invention relates to new recombinant nucleic acids. The invention also relates to a host cell comprising a recombinant nucleic acid or expression vector, an expression vector comprising a recombinant nucleic acid, a recombinant protein, a method of screening for drug candidates, a method of screening for a bioactive agent capable of binding to a carcinoma associated protein (QAP) encoded by a nucleotide sequence, a carcinoma drug, a method of evaluating the effect of a candidate carcinoma drug, a method of diagnosing carcinoma, a method for inhibiting carcinoma drug, a carcinoma. A method of evaluating the effect of a candidate carcinoma drug comprises administering the diagnosing carcinoma or propensity to carcinoma. A method of evaluating the effect of a candidate carcinoma drug comprises administering the drug to a patient, removing a carcinoma drug comprises administering the full of a candidate carcinoma drug comprises administering the full of a patient of a gene comprising the nucleotide sequence. A method of diagnosing carcinoma comprises determining alterations in the carcinoma activation of a gene comprising the nucleotide sequence. A method of diagnosing carcinoma comprises determining the expression of the gene comprising the nucleic acid sequence in a first tissue type from the first individual and comparing the expression of the gene from a second normal tissue type from the first individual and comparing the carcinoma. A method of inhibiting the carcinoma comprises administering to a patient of the CAP. Treating carcining a patient an inhibitor to the CAP. Treating carcining a patient and nucleic and agent sneedific.

Carcinomas comprises administering to a patient an inhibitor to CAP. Preating carcinoma comprises administering to a patient an inhibitor of CAP. Apprentice of the patient Neutralising the effect of a CAP comprises contacting an agent specific for the CAP. The polypeptide specifically binds to the protein encoded by the nucleic acid. It comprises an antibody that specifically binds to the protein encoded by the nucleic acid. The nucleic acid are useful for preparing a composition for diagnosing or treating carcinoma e.g., leukaemia or lymphoma. This sequence represents a human carcinoma associated (CA) nucleic acid of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from USPTO at seqdata.uspto.gov/sequence.html
